Maximum security

Nemef introduces a new series of cylinder- and lever-operated multi-point locks. These multi-point locks are SKG***® certified (burglary resistance according to NEN 5096) and meet the latest stricter guidelines and quality requirements. Additionally, this series of locks complies with the Dutch Police Hall Mark for Safe Living® and the SKH® mark (resistance classes 2 and 3).

Nemef's multi-point locks offer convenience, safety, and user-friendliness, and are easy to apply by industrial processors thanks to a very short installation time. Due to their compact dimensions, the locks fit into existing recesses, making renovation very easy.

The advantages of Nemef multi-point locks at a glance:

- Improved power transmission and durability due to the steel gear construction in the cylinder-operated multi-point lock
- Reinforced handle construction for higher load capacity
- Equipped with SKG***® in accordance with the revised guidelines and the Police Hall Mark for Safe Living®
- The specially designed hook bolt can bridge a gap (French doors) of 10 mm
- The combination of beveled hook bolts with a self-adjusting strike box ensures smooth operation (with cylinder-operated 5040 for doors warped up to 8 mm)
- Extra protection against the ingress of dirt into patent holes
- Also suitable for doors with a narrow frame due to the smaller installation depth, with a backspacing of 17.5 mm
- Suitable for use according to NEN 5096 burglary resistance classes 2 and 3

Features:

- Fire resistance for cylinder-operated 5040 (according to EN 16035)
- Equipped with two beveled hook bolts in the additional locks and a dead bolt in the main lock for use in wooden doors
- Nemef's multi-point locks are reversible due to the simple reversing mechanism
- Backset 55 and 65 mm
- Front plate length 1700, 1772, 1950, and 2090 mm
- Front plate width 20 and 24 mm
- Cylinder-operated 5040 and lever-operated 5060

Matching products

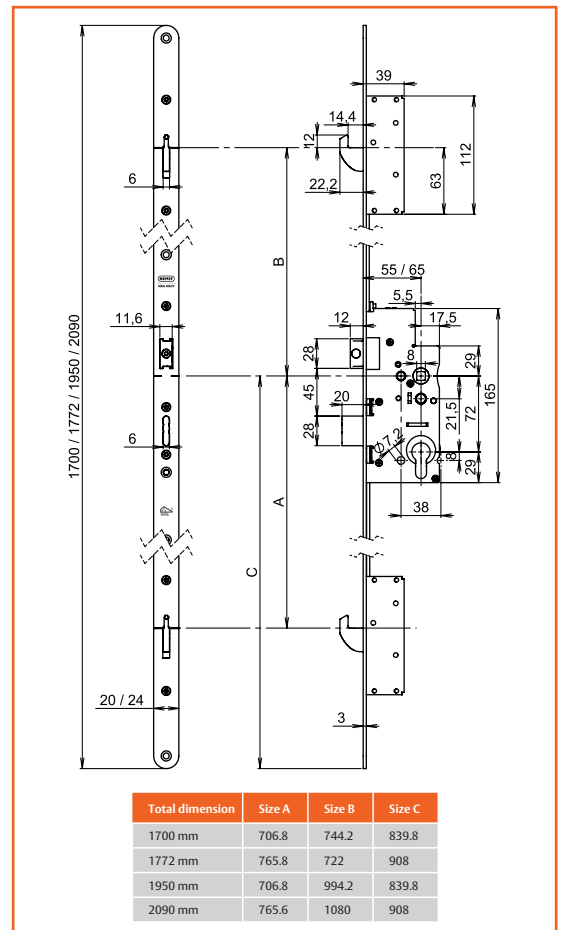

- Set VPM 5012, consisting of: Strike box VS 5002 and 2 pieces of additional strike boxes VS 5005
- Filler pieces 4913/90 consisting of: Steel galvanized front plate of 24 x 227 mm and front plate of 24 x 588 mm length

Always secure completely

Nemef security cylinders, security architectural hardware, security hinges, and adjustable strike boxes complete the multi-point lock and ensure a smooth and secure closure of the door.

Cylinder-operated 5040
Lever-operated 5060

High burglary resistance

Like all other security products from Nemef, Nemef multi-point locks offer high burglary resistance. This product meets the latest stricter guidelines and quality requirements of SKG***®, according to the newest testing methodology. Additionally, this product complies with the requirements of the Police Hallmark Mark for Safe Living®.
